

WaterMaxx[®] 2

WaterMaxx 2 helps growers use less water and maintain crop productivity by improving the way water moves in soils.

MAXIMIZE YOUR AVAILABLE WATER

- ◆ Improves infiltration allowing water and nutrients to move into the rootzone quickly and evenly.
- ◆ Improves the lateral movement of water increasing the horizontal reach of water in the soil profile.
- ◆ Improves the availability of water and nutrients to the plant increasing crop productivity.
- ◆ Improves penetrability of compacted soils allowing deeper root penetration and water movement.
- ◆ Improves the distribution of chemicals and nutrients applied with water.
- ◆ Increases stand count by reducing crusting and improving water infiltration, gas exchange, and seedling emergence.

USE RATES

WaterMaxx 2 may be applied through any type of irrigation system (except permanent earthen ditches) or by conventional spray equipment. IrrigAid Gold may be applied as a one time application or in multiple applications throughout the growing season. Rates and frequency will be dependent on crop type and local growing conditions. Consult your sales representative for details.

INJECTION THROUGH IRRIGATION SYSTEMS:

Inject WaterMaxx 2 at 1 - 4 quarts per acre (2.5 - 10 L/Ha) through any type of irrigation system (except earthen ditches).

CONVENTIONAL SPRAYERS:

WaterMaxx 2 may be spray applied at 1 - 4 quarts per treated acre (2.5 - 10 L/Ha). Irrigation or rainfall should follow application.

TRANSPLANT PURPOSES:

Add WaterMaxx 2 at 1 - 4 quarts (2.5 - 10 L) per 1000 gallons (4000 L) of transplant water.
